Weather Measuring Software

Leverage the storage and analysis capabilities of your PC

- Store data every 1, 5, 10, 15, 30, 60 or 120 minutes; the data logger will store up to six months worth of data
- Set the system to download automatically every day, or download manually whenever you like
- Transmission over the telephone lines using a modem and the telephone modem adapter (for serial port versions of WeatherLink only)

WeatherLink®

The WeatherLink data logger stores data—even when your computer is not running. Later, you can use the WeatherLink software to create graphs, calculate totals and averages, generate summaries, analyze trends, and more. Data may be exported to most popular database, spreadsheet, and word-processing packages.

- See current conditions at a glance on the instant weather bulletin
- View multiple weather variables at the same time to see their relationships
- Graph data on a daily, weekly or yearly basis
- Track weather information from multiple weather stations on the same computer (using one WeatherLink for each weather station)
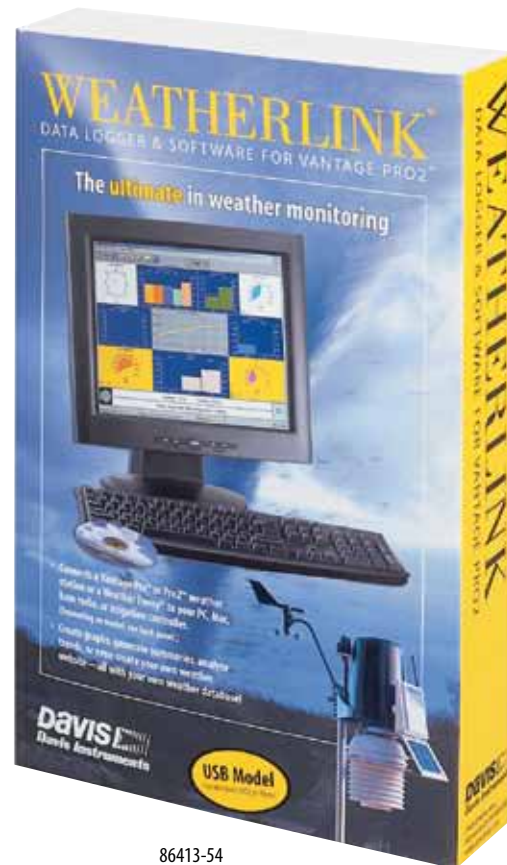

WeatherLinkIP

Post your weather data to the Internet without a PC. Simply plug the data logger into the back of your Vantage Vue or Vantage Pro2 console, and connect the cable to your cable/DSL router. Within minutes, you'll be able to see your weather data live on the Internet.
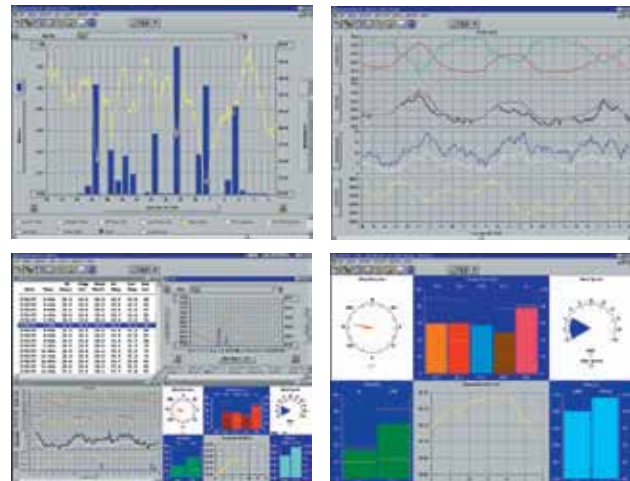

- Automatically upload data to third-party weather sites including CWOP (Citizen Weather Observer Program), the GLOBE Program, and more
- Get e-mail alerts of current weather conditions
- Download the data to your PC for all the same powerful charting, graphing, and analysis as our standard WeatherLink

Requirements:

- Computer running Windows® 95/ NT 4.0 / 98/ 2000 / ME / XP
- One free serial port for serial port version or one free USB port for USB version

86413-54

What's included: WeatherLink data logger, software CD, and 8 ft (2.4m) cable to connect the data logger to your computer.
